Education

Indian Institute of Information Technology, Kalyani
B. Tech. in Computer Science Engineering

2022 - 2026
CGPA: 8.96

Sri Ram Education Centre, Kanpur
Intermediate

2019 - 2021
94.8%

Projects

WildTrek

[GitHub: WildTrek-backend](#)

- **Tech Stack: Flask, MongoDB, PyTorch, REST API, Deep Learning**
- Built WildTrek with a team of 4 members in a 36-hour offline hackathon, StatusCode1, an app that enhances wildlife exploration through Image and Audio Recognition, enabling users to identify animals or birds and send alerts to authorities if any animal or bird needs medical assistance or other help.
- Implemented a One-Click Alert System for species recognition and an integrated Nearby Vet Locator to find veterinary clinics based on the user's location.
- Engineered REST APIs using Flask and MongoDB for species recognition and alert management, integrated with PyTorch models achieving 90% accuracy in animal identification through image and audio processing

AmazoScape Pro

[GitHub: AmazoScapePro](#)

- **Tech Stack: Django, Redis, Celery, Python, Bright Data, Jupyter Notebook, Selenium**
- Developed a robust web scraping project for efficiently extracting detailed information from Amazon product pages.
- Implemented Selenium to handle dynamic content extraction and effectively bypass captchas for improved data accuracy.
- Integrated Bright Data's rotating proxies to significantly enhance scraping efficiency and avoid IP blocking.
- Managed data storage with Django ORM and SQLite, ensuring streamlined and efficient handling of extracted information.

DNS Server Implementation in Go

[GitHub: DNS Server](#)

- **Tech Stack: Go (Golang), Networking (UDP), DNS Protocol**
- Implemented DNS query parsing and response generation, including handling various DNS record types.
- Supported both direct resolution using a specified upstream DNS resolver and default IP resolution.
- Implemented DNS message compression for efficient packet transmission.
- Handled DNS headers, flags, and question sections, ensuring correct interpretation and response to DNS queries.

Coding Profiles

LeetCode: *[Ajeyy \(top 13%\)](#)*

CodeChef: *[Ajaitiwarii \(1598 rating\)](#)*

Codeforces: *[Awake_Ajey](#)*

Achievements

- Solved more than **600** Data Structures and Algorithm problems on Leetcode, ranking in **top 12%** globally.
- **Secured a global rank of 334** in CodeChef contest **STARTERS118 (Div 4)**.
- **Secured a global rank of 884** in CodeChef contest **STARTERS119 (Div 3)**.
- **Attended 35+ contests** on CodeChef, LeetCode, and CodeStudio and Codeforces.
- Participated in two offline Hackathons (**StatusCode 0** and **StatusCode 1**) and an online hackathon(**REBASE**).

Skills

Languages: C++, Python, Go, Java, C, Dart, JavaScript

Technologies: VS Code, IntelliJ IDEA, Android Studio, Git

Frameworks: Bootstrap CSS, Tailwind CSS, React, Django, Redis, Celery, Flutter, Flask

Databases: MySQL, MongoDB

Operating Systems: Windows, Linux(Ubuntu)

Key Courses Taken:

Computer Science: Operating Systems, OOPs, DBMS, AI, Compiler Design, Computer Networks

Mathematics: Linear Algebra, Probability and Statistics, Discrete Mathematics
