Education

Indian Institute of Information Technology, Kalyani
B. Tech. in Computer Science Engineering

2022 - 2026
CGPA: 8.91

Sri Ram Education Centre, Kanpur
Intermediate

2019 - 2021
94.8%

Experience

AlgoUniversity

June, 2025

Technical Solutions Engineer Intern

Remote, India

- **Tech Stack: Django + Django REST Framework, React**
- Engineered a scalable web scraping pipeline to aggregate and structure **500+** interview questions from Reddit and LinkedIn, streamlining content sourcing.
- Redesigned the problem dashboard UI and implemented secure user authentication, boosting user retention by improving experience and security.
- Architected real-time backend infrastructure using Django Subprocess for executing code submissions, **reducing average response latency by 20%**.

Projects

CodeMaster

GitHub: CodeMaster

- **Tech Stack: Django + Django REST Framework, PostgreSQL, Redis + Celery, Docker, JWT, React**
- Built a full-stack coding platform allowing users to solve DSA and coding problems, execute code in real-time, and receive verdicts on test cases.
- Designed a **scalable code evaluation engine** with async Celery workers and Docker containerization to isolate user code, ensuring resource limits and eliminating execution abuse.
- **Enhanced the verdict system** to show detailed logs and runtime errors, accelerating user debugging by providing actionable insights.

GeoPV (Guide: Dr. Uma Das)

GitHub: GeoPV Analyser

- **Tech Stack: React, Flask, Redis, YOLOv12, OpenCV**
- Co-developed a rooftop solar potential analyzer for Indian rooftops, coordinating across a cross-functional team.
- Trained and fine-tuned a YOLOv12 model on **400+ satellite images**, achieving **72% precision and 69% recall** for rooftop segmentation.
- Integrated Redis for efficient background task handling and built a map-based UI using React for real-time geospatial visualization.
- [View Demo: Youtube](#)

Other Projects

- **WildTrek (36-hour Hackathon Project)** – Created a wildlife alert app with image-based species recognition and live vet locator; **secured runner-up** position among 40+ hackathon teams.
- **AmazoScrape Pro** – Engineered a CAPTCHA-bypassing web scraper to extract product details (title, price, reviews) from **1,500+ Amazon pages** with a **90% success rate**.
- Pursued self-learning projects including: **DNS Resolver in Golang, Android Weather App (Flutter)** displaying live weather data for 1000+ cities and **Recipe Book App (Django)**.

Achievements

- **Secured rank 1** among all participants in a competitive Graphs Programming Contest organized by **AlgoUniversity**.
- Solved more than **800** Data Structures and Algorithm problems on Leetcode, ranking in **top 12%** globally.
- Participated in two offline Hackathons (**StatusCode 0 and StatusCode 1**) and an online hackathon(**REBASE**).

Coursework and Skills

Languages: C++, Python, Go, Java, C, Dart, JavaScript

Frameworks: Bootstrap CSS, Tailwind CSS, React, Django, Redis, Celery, Flutter, Flask

Computer Science: Operating Systems, OOPs, DBMS, AI and Machine Learning

Mathematics: Linear Algebra, Probability and Statistics, Discrete Mathematics

Databases: MySQL, MongoDB
